LANDING

After more than one year of development and athlete testing we are proud to unveil the BigAirBag® LANDING which is set to once more redefine athlete limitations and advance progression in freestyle action sports.

The revolutionary design and fully customizable shape means the airbag adopts the contour of the landing area it covers, providing fall safe protection at the knuckle, on the landing ramp itself and finally in the run out area. The result is an ultra realistic training platform that mimics a real landing ramp delivering better impact absorption than a foam pit while still remaining more forgiving than a resi ramp. It is firm enough for you to land and ride away from, but if you bail the BigAirBag® LANDING will catch your fall and protect you from injury.

- ✓ FULLY CUSTOMIZABLE SIZE, SHAPE AND DESIGN
- ✓ ADJUSTABLE SOFTNESS AND FIRMNESS
- ✓ HIGHLY ADVANCED FABRICS
- ✓ RIDE AWAY TOPSHEET TECHNOLOGY
- ✓ INFLATABLE RAMPS
- ✓ INNOVATIVE BLOWER SYSTEM INSIDE
